EDX WIRELESS

SIGNAL PRO
YOUR FIRST & LAST PLANNING SOFTWARE

SignalPro is the **industry-leading wireless network solution**, focused on solving complex engineering problems, saving time & money and improving your business. Plan, deploy and optimize networks of any size including 5G, LTE, CBRS, Smart City, Smart Grid AMI, in-building DAS, Broadband Delivery, and more.

DESIGN CONSULTANTS

Save on hardware and IT costs while taking advantage of new opportunities as they arise and accommodate any customer request that comes your way.

SALES ENGINEERS

Respond to more RFPs with instant access to an entire suite of design tools and win with accurate bids and streamlined installs.

NETWORK OPERATORS

Field support calls efficiently with maps that provide long-range accuracy of network design and performance regardless of the size of network.

- Support for 30MHz-100GHz
- Monthly software releases
- Pre-sales tools
- Networks of any size
- Accuracy at long range

- All service areas
- Equipment agnostic
- Report and map creation
- Field/office collaboration
- Existing system optimization

NATIONWIDE

EDX offers the only platform with the ability to run nationwide coverage analysis in a single run. Save time and money by eliminating the need to reset study grids and perform multiple runs for large service areas.

AUTO-PLACEMENT

Determine site locations quickly and automatically based on equipment parameters, traffic, capacity and other considerations. Import tower/pole databases or let the program determine potential site locations, eliminating the need to run coverage studies for each potential site in a service area.

REPLAY

Replay of studies for "what if" analysis and delta studies turn faster results for network acceptance and RFP responses.

FLEXIBLE LICENSING

The Cirrus Platform provides project-based licensing for flexibility of use. The end-to-end solution is used for both long- and short-term projects enabling you to achieve sales goals and gain business in new and emerging technologies.

- Short-term projects & RFP responses
- Predictable pricing for unpredictable usage
- Surge licensing on demand
